

REMOVABLE CAR SEAT COVERS AND METHODS FOR USING

ABSTRACT OF THE DISCLOSURE

Embodiments of the invention provide novel car seats, car seat covers, and methods for their use. One exemplary embodiment comprises a car seat cover for a car seat, which can comprise a frame, a padding disposed over the frame, two shoulder straps and a crotch strap. The car seat cover can comprise a fabric cover having an outer periphery, which can be adapted to be coupled to the car seat frame over the padding. The fabric cover may define a pair of shoulder strap openings and a crotch strap opening, which can be disposed so as to allow the shoulder straps and the crotch strap, respectively, to be extended through the fabric cover. Thus, in accordance with some embodiments, the shoulder straps and the crotch strap can be used to secure a child in the car seat, with the car seat cover being disposed between the child and the car seat.
